## **DETAILED ACTION**

## Election/Restrictions

1. This application contains claims directed to the following patentably distinct species:

- a. A method and device wherein the specified recharging interval is dynamically adjusted based on a programmed pacing pulse amplitude setting;
- b. A method and device wherein the specified recharging interval is dynamically adjusted based on a programmed pacing pulse duration setting;
- c. A method and device wherein the specified recharging interval is dynamically adjusted based on a programmed AV interval between an atrial and a ventricular pacing pulse;
- d. A method and device wherein the specified recharging interval is dynamically adjusted based on a programmed offset interval between ventricular paces during biventricular pacing;
- e. A method and device wherein the specified recharging interval is dynamically adjusted based on a measured lead impedance;
- f. A method and device wherein the specified recharging interval is dynamically adjusted based on a measured voltage droop during a pacing pulse;
- g. A method and device wherein the specified recharging interval is dynamically adjusted based on the formula

$$T_{recharge} = -RC_1(ln(2V_{droop}/V_i/(1-e^{PW/RC})))$$

Art Unit: 3766

where R is a measured lead impedance,  $C_1$  is a measured lead capacitance,  $V_{droop}$  is a measured voltage droop during a pacing pulse,  $V_i$  is a programmed pacing pulse amplitude, PW is a programmed pacing pulse duration, and C is a total measured capacitance; and

h. A method and device wherein the specified recharging interval is dynamically adjusted based on a look-up table that contains optimum recharge intervals corresponding to one or more programmable or measured pacing parameter values.

The species are independent or distinct because each is directed towards a different programming scheme to dynamically adjust the recharging interval and do not require the specifics of the other species..

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 11 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tammie Heller whose telephone number is 571-272-1986. The examiner can normally be reached on Monday through Friday from 7am until 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert E. Pezzuto can be reached on 571-272-6996. The fax phone Application/Control Number: 10/723,023

Art Unit: 3766

number for the organization where this application or proceeding is assigned is 571-

273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
